7. Report of FDP on “Qualitative Research Methods and Machine Learning” organized from 9th -14th July 2018

The term ‘big data’ always refer to quantitative data which can be easily expressed as numbers or categories. Statistical and machine learning techniques “love” numbers. On the other hand Qualitative researchers believe that numbers won’t always work to draw inferences. They believe that by interviewing people and asking them to answer open-ended questions one can learn more than by simply looking at hard data. Moreover, data mining is the process of extracting hidden patterns from data. Data mining uses machine learning algorithms, to classify, predict, group, recommend, etc. So, the knowledge of qualitative research methods, case study and

machine learning software operation would enhance the user skill which in turn can be used in class room teaching and academic research supervision, writing Ph.D and M.Phil dissertations. Keeping this in view, our institute organize a **Faculty Development Program** on “**Qualitative Research Methods and Machine Learning**” from 9th - 14th July, 2018.

The aim of one week FDP is to understand right approach towards research design, methods and understanding of research epistemologies driving qualitative research methods. It will also equip participants with skills and essential knowledge for application of machine learning techniques in various domains, along with hands-on-training on machine learning using KNIME. In depth knowledge of case study methods for effective teaching will also be the part of the FDP. Key highlights of FDP were:

- Approaches in Data Analysis, Content Analysis, Thematic Analysis Content Analysis, Narrative and Sentiment Analysis using NVIVO
- Overview of Qualitative Research Paradigms and Epistemology Applications of Machine Learning in various industry segments
- Classification, Regression, Clustering Association Analysis Text Mining and Social Sentiment Analysis
- Approaches to Qualitative Research Ethnography Phenomenology, Grounded Theory, Narrative Research
- Machine Learning/Data Mining using KNIME Basics of Data Mining, Types of Data Mining Supervised and Unsupervised learning Case Study Development Method

Resource persons were distinguished experts from corporate and academia who were rich in expertises and experience.
